Regional Beach Sand Project

Beginning this summer, the San Diego Regional Beach Sand Project will widen beaches from Imperial Beach to Oceanside by adding more than a million cubic yards of clean, high quality sand to our eroded shoreline.

Estimated Replenishment Timeline

The Regional Beach Sand Project is coming to Imperial Beach!

Placement of more than 400,000 cubic yards of clean, beach quality sand will begin in September. Additionally, mobilization of equipment will occur beginning the week of August 20th.

Work will begin at the south end of the City of Imperial Beach placing sand from approximately Cortez Avenue to where the revetment or rock wall ends, then moving north from Cortez Avenue to end at approximately Elkwood Avenue. Work will occur 24 hours per day, 7 days a week and will take approximately four weeks to complete.

This replenishment project is made possible through funding from the cities of Carlsbad, Encinitas, Imperial Beach, Oceanside, and Solana Beach, and the California Department of Boating and Waterways. The Great Lakes Dredge & Dock Company, CALTROP, Moffat & Nichol, Coastal Frontiers Corp., and Merkel & Associates Inc. also participated on this project. A portion of the land required for the 2012 Regional Beach Sand Project was contributed by the California State Lands Commission.
